

Week 13 Customer Portal

Extra Features Beyond Plan

KingFisher Wings / Fresa Gold ERP

Document type: Productivity enhancement backlog (backend-first)

Scope: Customer Party Portal only (not Vendor Portal / CRM)

Audience: Product & engineering

Date: 8 August 2026

1. Purpose

Week 13 Customer Portal backend is feature-complete against the functional plan (auth, shipments, documents, quotations, finance/CCP, messages, track widget, notifications, invite).

This document consolidates all suggested extras beyond the plan that improve customer productivity and product quality before moving to Week 14 - without requiring a full UI build first (APIs + domain logic).

2. Guiding principles

- Backend-first; UI can consume later.
- Customer facilitation only - no staff ERP redesign.
- No payment gateway, no full live chat, no customer editing of jobs/invoices/quotes.
- Do not pull Week 14 Vendor Payment Portal or CRM into this backlog.
- Prefer request forms + read-enriched views over write access to ops data.

3. Tier 1 - Strong productivity wins (recommended first)

1. Portal quote accept / reject

What: POST /portal/quotations/:id/accept and /reject (with reason).

Why: Cuts email lag; sales closes faster.

2. Document expiry / readiness alerts

What: Notify when required docs (DO, CAN, POD, etc.) are uploaded or about to expire.

Why: Stops 'is my DO ready?' chasing.

3. Saved filters / dashboard preferences

What: Per-user defaults: shipment filters, invoice view, notification prefs.

Why: Power users work faster every day.

4. Bulk / export endpoints (CSV)

What: CSV export for shipments and invoices (statement PDF already exists).

Why: Finance customers live in Excel; fewer support tickets.

5. Shared party inbox

What: Party-level message visibility for all contacts at the same Party.

Why: Matches real CS + finance sharing.

4. Tier 2 - Freight differentiation

6. Container / cargo visibility pack

What: Safe cargo/container summary (containers, seals, free days, demurrage flags) without financials.

Why: High value for importers.

7. Appointment / delivery window requests

What: Structured delivery/pickup window request into a staff queue.

Why: Reduces phone/WhatsApp for last-mile / DO pickup.

8. Milestone subscription controls

What: Per-party or per-user opt-in for milestone alerts (+ optional email).

Why: Turns alert noise into a product feature.

9. Credit early-warning digests

What: Daily digest: invoices due soon, credit % used.

Why: Finance foresight; fewer holds.

10. Public track short links

What: Branded short or signed track URLs for email/SMS without full portal login.

Why: Ops/sales paste into emails easily.

5. Tier 3 - Platform polish & trust

11. Portal audit log

What: Who viewed/downloaded which invoice or document.

Why: Compliance and dispute support.

12. Password change + force rotate

What: Self-serve password change; staff can force rotate.

Why: Security without staff reset every time.

13. 2FA for portal

What: OTP / authenticator for portal login.

Why: Enterprise customer requirement.

14. API keys for integrations

What: Customer pulls shipment status into their own TMS.

Why: Large shipper stickiness.

15. Idempotent dispute/message create

What: Idempotency keys on create endpoints.

Why: Prevents double-submit on flaky networks.

16. Rate limits per party

What: Cap noisy portal users.

Why: Protects staff inbox quality.

6. Ops self-serve (cuts phone / email)

17. Exception / hold reason visibility

What: Safe hold reason + what the customer must do on a shipment.

Why: Answers 'why isn't it moving?'

18. Document checklist per shipment

What: Required vs available vs missing docs per job.

Why: Clear 'what's blocking me'.

19. POD / delivery confirmation request

What: Customer confirms receipt or flags short/damage into a staff ticket.

Why: Closes last-mile loop without WhatsApp.

20. Amend / SI / shipping-instruction request

What: Structured amend form (consignee, notify, marks, notes) with status flow.

Why: High exporter traffic; CS time saver.

21. Container free-time countdown

What: Remaining free days + demurrage risk from container/ETA data.

Why: Daily stickiness for importers.

7. Finance friction reducers

22. Invoice 'I will pay by' commitment

What: Intent only: date + method (cheque / transfer / PDC) - not a gateway.

Why: Finance forecast queue; fewer chase calls.

23. Remittance advice upload

What: Reference + optional PDF for staff matching.

Why: Customer feels heard; matching faster.

24. Tax / GST invoice pack download

What: Month or job multi-PDF / ZIP pack.

Why: Compliance users ask constantly.

25. Dispute context pack

What: Auto-attach invoice lines + shipment ref when raising a dispute.

Why: Fewer 'which invoice?' loops.

8. Quote & commercial

26. Re-quote / clone previous

What: Prefill new quote request from past quotation or job.

Why: Repeat customers book in seconds.

27. Quote comparison (variants)

What: Side-by-side customer-safe totals for Option A/B.

Why: Faster accept/reject decisions.

28. Quote validity countdown + remind

What: Notify N days before quote expires.

Why: Protects both sides from silent expiry.

9. Collaboration inside the customer org

29. Internal notes (party-private)

What: Notes on a shipment visible only to the Party (not staff).

Why: CS + finance coordination.

30. Watchlist / follow shipment

What: Pin jobs; only those drive push/email.

Why: Better than all-or-nothing alerts.

31. Delegate access (temporary viewer)

What: Time-boxed view-only access for broker/warehouse on one job or docs.

Why: Common real-world freight pattern.

10. Onboarding & confidence

32. First-login guided checklist (API)

What: Invite accepted, profile complete, first shipment/invoice actions.

Why: Adoption visibility for staff + clarity for users.

33. Contact directory

What: Tenant-configured CS / ops / finance contacts per party (read-only).

Why: Stops wrong-person emails.

34. FAQ / knowledge snippets by event

What: Tenant-managed help snippets for milestones/exceptions.

Why: Self-serve before opening a message.

11. Quiet but high-trust

35. Signed document share links

What: Time-limited public URL for one DO/invoice; audit-logged.

Why: Share with warehouse without full portal login.

36. Activity feed (customer timeline)

What: Unified feed: milestones, docs, invoices, replies.

Why: One place to stay current.

12. Suggested implementation order (Week 13.5)

Shortlist A - original before-Week-14 five

- Quote accept / reject (#1)
- Export CSV - shipments + invoices (#4)
- Party-shared messages (#5)
- Document-ready notifications (#2)
- Portal preferences + milestone opt-in (#3 + #8)

Shortlist B - maximum customer facilitation five

- Document checklist per shipment (#18)
- Free-time / demurrage risk (#21)
- Re-quote from past (#26)
- Remittance advice upload (#23)
- Activity feed (#36)

13. Explicitly out of scope (do not pull into Week 13.5)

Online payment gateway

Large PCI / product surface; not required for first productivity gains.

Full live agent chat / WebSocket chat

Replies already exist; realtime chat is its own product.

Customer editing of jobs, invoices, or quotes

Spec forbids; breaks ops trust.

Vendor Payment Portal

Week 14.

CRM

Week 14.

WhatsApp as primary channel

Optional later; email + in-app first.

14. Feature index (all 36)

1. Portal quote accept / reject
2. Document expiry / readiness alerts
3. Saved filters / dashboard preferences
4. Bulk / export endpoints (CSV)
5. Shared party inbox
6. Container / cargo visibility pack
7. Appointment / delivery window requests
8. Milestone subscription controls
9. Credit early-warning digests
10. Public track short links
11. Portal audit log
12. Password change + force rotate
13. 2FA for portal
14. API keys for integrations
15. Idempotent dispute/message create
16. Rate limits per party
17. Exception / hold reason visibility
18. Document checklist per shipment
19. POD / delivery confirmation request
20. Amend / SI / shipping-instruction request
21. Container free-time countdown
22. Invoice 'I will pay by' commitment
23. Remittance advice upload
24. Tax / GST invoice pack download
25. Dispute context pack
26. Re-quote / clone previous
27. Quote comparison (variants)
28. Quote validity countdown + remind
29. Internal notes (party-private)
30. Watchlist / follow shipment
31. Delegate access (temporary viewer)
32. First-login guided checklist
33. Contact directory
34. FAQ / knowledge snippets by event
35. Signed document share links
36. Activity feed (customer timeline)

15. Notes for engineering

- Reuse existing portal guards, party ownership helpers, and domain services.
- Keep writes as request / intent records with staff review queues where ops ownership must stay with the forwarder.
- Emit notifications consistently with existing NotificationType patterns.
- Every new portal read/write must remain tenant- and party-scoped.
