

KFPP Quote Requests API — live test results

(General Trading discovery)

Date tested: 2026-09-15 (UTC)

Target: KingFisher Wings Group WordPress Quote Requests API

Base URL: `https://kingfisherwingsgroup.com/wp-json/kfpp/v1/quotes`

Relation: Discovery input for `docs/GENERAL_TRADING_PLAN.md` (external system bridge for one tenant).

Raw artifacts: `docs/generated/kfpp/` (response bodies; API key redacted where present).

Security: The WordPress admin UI exposes a live API key. That key was used for this probe and has appeared in chat/screenshots. **Rotate/generate a new key** in WP after testing, prefer header auth only, and store the secret in encrypted tenant settings — never in git or docs.

1. Executive verdict

Question	Result
Is the documented API reachable?	Yes
Does API-key auth work?	Yes (<code>X-KFPP-Api-Key</code> and <code>?api_key=</code>)
Does unauthenticated access work?	No → <code>401 rest_forbidden</code>
Can we list quote requests?	Yes → <code>200</code> with shape <code>{ "total": 0, "items": [] }</code>
Are there records to map today?	No — empty inventory
Can we exercise real GET/:id + successful PATCH?	Not fully — no existing numeric IDs; missing id → <code>404 kfpp_not_found</code>
Is this a full general-trading invoices/quotes ERP API?	No — WordPress inquiry / quote-request endpoint only (<code>kfpp/v1</code> exposes quotes collection + item)
Fit for KingFisher bridge Option A (live proxy)?	Feasible for quote-requests once data exists
Fit for invoices + merchandise trading docs?	Not covered by this API — need another system or more WP routes

Bottom line: The connector shape is usable (auth + list + documented get/patch by numeric id). Right now there is **no payload to design field mapping or UI columns**. Submit at least one website inquiry (or seed a request) and re-run GET list / GET id / PATCH status.

2. Published contract vs observed routes

Documented (WP plugin UI)

Operation	Method	Path
List all requests	GET	/wp-json/kfpp/v1/quotes
Single request	GET	/wp-json/kfpp/v1/quotes/{id}
Update status	PATCH	/wp-json/kfpp/v1/quotes/{id} body { "status": "..." }

Auth (either):

- Header: X-KFPP-API-Key: <key>
- Query: ?api_key=<key>

Observed from GET /wp-json/kfpp/v1

```
/kfpp/v1/quotes          methods: GET
/kfpp/v1/quotes/(?P<id>\d+) methods: GET, PATCH
```

Notes:

- Item `id` must be **digits only**. Non-numeric path → WordPress `rest_no_route` (404).
 - Collection does **not** register POST/PUT/DELETE (confirmed 404 `rest_no_route`).
 - Namespace index args for list/detail are empty in the schema (`"args": []`) — query filters are undocumented.
-

3. Test matrix (executed)

#	Perspective	Request	HTTP	Outcome
01	No auth	GET /quotes	401	rest_forbidden / "Sorry, you are not allowed to do that."
02	Bad key (header)	GET /quotes + X-KFPP-API-Key: bad-key	401	Same forbidden body
03	Good key (header)	GET /quotes + valid header	200	{"total":0,"items":[]}
04	Good key (query)	GET /quotes?api_key=...	200	Same empty list
05	Pagination guess	?page=1&per_page=5	200	Empty list (params appear ignored or noop when empty)
06	Status filter guess	?status=new	200	Empty list
07	Status all	?status=all	200	Empty list
08	Search guess	?search=test	200	Empty list
09	Order guess	?orderby=date&order=desc	200	Empty list
10	Missing numeric id	GET /quotes/99999999	404	kfpp_not_found / "Quote request not found"
11	Invalid id shape	GET /quotes/not-an-id	404	rest_no_route (route regex \d+)
12	Create via POST	POST /quotes	404	rest_no_route
13	Delete collection	DELETE /quotes	404	rest_no_route
14	Bearer token style	Authorization: Bearer <key>	401	Not accepted
15	Lowercase header	x-kfpp-api-key	200	Accepted (HTTP headers case-insensitive)
16	OPTIONS / CORS preflight	OPTIONS /quotes	200	Returns route metadata; no Access-Control-Allow-Origin for arbitrary origin observed on GET
17	PATCH missing id	PATCH /quotes/99999999 {status:pending}	404	kfpp_not_found
18	PATCH without auth	PATCH /quotes/1	401	rest_forbidden
19	GET id 1	GET /quotes/1	404	kfpp_not_found (no row)
20	PATCH id 1 invalid/empty body	with auth	404	Not found before body validation can be observed
21	WP root	GET /wp-json/	200	Site name "KingFisher Wings Group", Hostinger/PHP 8.3

22	Namespace index	GET /wp-json/kfpp/v1	200	Routes as above
----	-----------------	----------------------	-----	-----------------

Latency (successful authenticated GETs): roughly **0.5–1.6 s** round-trip from this environment (Hostinger CDN `DYNAMIC`).

4. Response shapes observed

Auth failure

```
{
  "code": "rest_forbidden",
  "message": "Sorry, you are not allowed to do that.",
  "data": { "status": 401 }
}
```

Empty list (success)

```
{
  "total": 0,
  "items": []
}
```

Not found (plugin)

```
{
  "code": "kfpp_not_found",
  "message": "Quote request not found",
  "data": { "status": 404 }
}
```

Wrong route (core WP)

```
{
  "code": "rest_no_route",
  "message": "No route was found matching the URL and request method.",
  "data": { "status": 404 }
}
```

List response headers of interest

- `Content-Type: application/json; charset=UTF-8`
- `allow: GET` (collection)
- `access-control-allow-headers: Authorization, X-WP-Nonce, Content-Disposition, Content-MD5, Content-Type`

— **does not advertise** `X-KFPP-API-Key`, so browser SPA calls from another origin may need a backend proxy (which matches KingFisher's planned server-side connector).

- No `X-WP-Total` / `X-WP-TotalPages` on the empty list response (pagination may be custom via `total` in JSON).

Item field schema

Unknown. List is empty; no sample item returned. Re-test after creating an inquiry on the WordPress site to capture keys (expected candidates from typical inquiry forms: name, email, phone, message, status, created_at, etc.).

5. Perspectives summary

Security / auth

- API key required for list/detail/patch.
- Query-string auth works but **leaks into logs, proxies, browser history** — KingFisher connector should use **header only**.
- Bearer/JWT style not supported.
- Key rotation UI exists ("Generate New Key") — use it after this research.

Functional completeness vs docs

- Docs match registered routes for GET list, GET id, PATCH id.
- No write-create of quotes via this API (inquiries likely created by the public website form, not REST POST).

Data readiness for General Trading bridge

- **Quote requests ≠ trading sales invoices.** This API alone does **not** satisfy "show trading invoices and quotes from their merchandise system" unless that business *is* this WordPress inquiry funnel.
- Empty `items` means we cannot validate status enums, PATCH semantics, or PDF/line-item needs yet.

Reliability / ops

- Hosted on Hostinger (`platform: hostinger`, `Server: hcdn`), PHP 8.3.
- Sub-second to ~1.5s latency acceptable for admin list proxy; for heavy sync, still prefer mirror (Option B in the trading plan) if volume grows.

Integration recommendation (update to plan)

Plan option	Fit with KFPP API
A — Live proxy	Good for staff list of website quote requests once data exists
B — Sync mirror	Still recommended if ERP needs search/history while WP is down
C — Hybrid	List from mirror; detail/status from live PATCH
D — Deep link	Possible today (open WP admin) but weaker UX
Invoices	Not available on <code>kfpp/v1</code> — separate discovery required

Suggested KingFisher mapping (when building):

1. SuperAdmin enables `trading_bridge` **or** a narrower `wp_quote_requests` feature for the one tenant.
2. Store base URL + API key encrypted.
3. `GET /trading/quote-requests` → proxy/mirror of KFPP list.
4. `PATCH /trading/quote-requests/:externalId/status` → KFPP PATCH.
5. Do **not** merge into freight `/quotations` or `/invoices`.

6. Gaps / follow-ups

1. **Create one real quote request** on kingfisherwingsgroup.com and re-run:
 - `GET /quotes` (capture item schema)
 - `GET /quotes/{id}`
 - `PATCH /quotes/{id}` with a documented status, then restore previous status
 2. Ask WP plugin owner for **allowed status values** and whether list supports filters (`status` , date range, pagination).
 3. Confirm whether **invoices** exist in another plugin/namespace or a different trading system entirely.
 4. **Rotate API key** after this probe; never commit secrets.
 5. Optional: add automated smoke script `scripts/probe-kfpp-quotes-api.py` (DNS from some sandboxes failed; `curl.exe` from this machine worked).
-

7. Pass / fail scorecard

Area	Score	Notes
Reachability	PASS	HTTPS REST live
Auth enforce	PASS	401 without/invalid key
Auth success	PASS	Header + query
List contract	PASS	Stable {total,items}
Detail contract	PARTIAL	Route works; no data to assert body
PATCH contract	PARTIAL	Auth + 404 path verified; success path untested
Create/delete via API	N/A / FAIL vs naive expectation	Not in contract; correctly 404
Invoice coverage	FAIL for full trading goal	Quotes/inquiries only
Ready to build freight-side mirror	BLOCKED on sample payload	Need ≥1 real item

Generated from live probes against `kingfisherwingsgroup.com` for General Trading research. Not a production KingFisher feature.
